1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-7, 12 and 16-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese Patent 5-181,403 generally for reasons of record noting the following.

Applicant has cancelled previous claim 11 and placed the limitation concerning the angle of incidence of the radiation being adjustable set forth in that claim into all the independent claims. A machine translation of JP -403 has also been provided, and there does not appear to be any direct suggestion of making the angle of incidence of the first radiation step adjustable. However, paragraph 0036 of the translation discloses that the optical properties of the element can be changed by changing the pattern of irradiation. First of all, it is submitted on this basis that providing an adjustable angle of incidence would have been obvious dependent on the exact optical properties desired for the liquid crystal element. If it is known that the optical properties can be varied by changing the angle, then one of ordinary skill would have known to make the angle adjustable to make optical elements of different properties. Also, from a purely legal standpoint, it is normally considered to be within the skill level of the art to make a known structure or a device allowing some operation—in this case, a radiating means for the first radiation—to be adjustable for the attendant benefits that would accompany the adjustability. See *In re Stevens*, 101 USPQ 284.

2. Applicant's arguments filed July 2, 2009 have been fully considered but they are not persuasive. Applicant submits that the machine translation of JP -403 does not contain any reference to making the angle of incidence of the first radiation adjustable and hence the instant claims are allowable thereover. However, this line of argument is not persuasive for the reasons noted in paragraph 1, supra.

3. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
